

TIMELINE

25 th Oct.		I got the information regarding the new project from the “ Super Science Fair Project 2007 ” site.	O
27 th Oct.	to	29 th Oct	N
1 st Nov.	to	4 th Nov.	M
5 th Nov.	to	13 th Nov.	L
15 th Nov.	to	17 th Nov.	K
18 th Nov.	to	22 nd Nov.	J
23 rd Nov.	to	30 th Nov.	I
1 st Dec.	to	6 th Dec.	H
7 th Dec.	to	10 th Dec.	G
11 th Dec.	to	16 th Dec.	F
17 th Dec.	to	20 th Dec.	E
21 st Dec.	to	23 rd Dec.	D
24 th Dec.	to	25 th Dec.	C
26 th Dec.	to	28 th Dec.	B
31 st Dec.			A

SCIENCE LOG

25th October 2007

The information regarding the new project from the “[Super Science Fair Project 2007](#)” site.

27th October to 29th October 2007

Read the rules & regulations and format required for the project very carefully. Thought on different ideas to be sent as a project.

1st November to 4th November 2007

Different ideas thought for the project like effect of acid rains on plants, effect of salt water of plant etc. but had a problem in getting things required for the project.

5th November to 13th November 2007

Went to my native place during the Diwali vacation for nearly nine days. There got an idea of water purification when I saw the polluted river there. Tried to gather more information on this topic.

15th November to 17th November 2007

Investigated for more information related to water and its treatment. found various different methods for water purification and tried to get

more information about each step in detail. Much of the information was been obtained and thus finalized it as my next project.

18th November to 22nd November 2007

Took ideas and opinions from parents and teachers. We discussed how the experiment was actually to be performed and presented.

23rd November to 30th November 2007

Gathered the material required for the experiment and tried to assemble it together but had certain complications in doing so.

1st December to 6th December 2007

Referred many more books, articles and tried to collect some more additional information related to the topic. Discussed with my teacher how the different jars were to be placed.

7th December to 10th December 2007

Setup the full model of the project, and performed the experiment. We failed to get the required result, due to the leakage in the jars.

11th December to 16th December 2007

Performed the experiment again and again till it gave the expected results. At each step we observed that the impure water was

becoming more and more clear and the boiling of water killed the germs in it, thus making it suitable for use.

17th December to 20th December 2007

Since the experiment gave expected results I gathered and wrote down the theory and explanation of each step in detail. The fair typing work on the computer was also completed.

21st December to 23rd December 2007

The completed project was given to the school teacher for her approval and she returned it back on 23rd December 2007.

24th December to 25th December 2007

Took the trial for the video shooting. Took the video shooting, and gave it for editing. We received the CD back on 25th December 2007.

∴

26th December 2007 to 28th December 2007

Gave the presentation to a mentor for checking. Printed the final copies, and we submitted the project on 31st December 2007.

FINAL WORD

“Science Fair Project 2007” has always encouraged me to keep participating in the project competition.

It has helped me in improving my reasoning ability and has widen my Knowledge.
